

EXPORT-OPS MYTHS

Four things exporters accept as normal.

They aren't. Here's what a controlled workflow
does instead.

~~Re-keying invoice values from the ERP
is just part of the job.~~

FACT

Pull it. Don't type it.

Customer, order lines and invoice values come from Oracle read-only — the number on the document is the number in the ERP.

~~The latest version is whichever file was emailed last.~~

FACT

Every version, checksummed.

Uploads carry a SHA-256 checksum and a version history. Replacing a document asks why — and keeps the old one.

~~Approval means someone replied 'ok' to an email.~~

FACT

**Approval is a
recorded decision.**

A different person approves, rejects or waives — with the reason captured in an append-only audit trail.

~~Chasing payments is someone's spreadsheet.~~

FACT

Balances chase themselves.

Outstanding balances come from invoices and receipts; reminder rules and an escalation sweep do the follow-up.

Retire the tracker spreadsheet.

EOT-PCS is in pilot. Book a walkthrough on your own document rules.
