

AI TRADING MYTHS

Four things people get wrong about AI agents.

What an AI should and shouldn't be allowed to do with a trade.

SWIPE · 4 MYTHS

MYTH 1 / 4

~~The AI agent decides what to buy.~~

FACT

The AI only interprets.

It turns headlines and messages into a structured signal. Deterministic code decides; the broker executes; everything is logged.

MYTH 2 / 4

~~A human override can skip any check.~~

FACT

Not the risk core.

An override can skip advisory gates. Cash, buying power, daily-loss and position limits still apply — and the override is stamped in the audit trail.

MYTH 3 / 4

~~You need paid data feeds to start.~~

FACT

Keyless-first.

The platform stays fully functional with zero API keys configured, degrading across data providers.

MYTH 4 / 4

~~Paper trading is just a toy.~~

FACT

Paper is the gate.

Live activation needs 20+ paper trades, 14+ days of history, a reconciled ledger and acknowledged disclosures — and it names whatever is unmet.

Risk control is the product.

Start in the simulator — a virtual \$100,000 and no real money.
