

Running a made-to-order *food brand across two continents.*

How BigMo's niche-commerce flow runs Swaad — a Chennai kitchen shipping 101 items across the US.

Six stages, *one order record.*

Every order moves Order → Demand → Production → Supply → Fulfilment → Delivery, with a board per role.

101 products, *zero licensed images.*

One catalog file feeds the storefront, the database seed and the product art — every image is generated from code.

“Will it arrive *before Deepavali?*”

Per-product kitchen lead time + delivery window = the last day to order, for six festivals a year.

Festival calendar · 2026–27

Navaratri	9 Oct
Vijayadashami & Ayudha Puja	20 Oct
Deepavali	8 Nov
Karthigai Deepam	24 Nov
Thai Pongal	15 Jan
Tamil Puthandu	14 Apr

Quantity tiers *per line.*

6+ of one item: 5% off · 12+: 10% · 24+: 15%. Cents are floored in the customer's favour.

Verified-buyer reviews.

Restock alerts.

Only customers whose order was delivered can review. Back-in-stock alerts fire once, on the real 0 → in-stock change.

Plain-language questions, *read-only answers.*

Six read-only tools, a cached morning briefing, and a SQL fallback when no model is configured.

Ops copilot · morning briefing

"What's stuck in production today?"

Read-only tools it can call

`list_orders()`

`get_order()`

`check_inventory()`

`search_catalog()`

`demand_summary()`

`pipeline_snapshot()`

No writes. No keys? Falls back to SQL rules.

Purchase plans are clamped and validated.

Briefing cached for 15 minutes.

Got a niche brand *that needs to run like this?*

BigMo builds and operates the storefront, the order flow and the ops copilot. Talk to us.
