

Ledger Book

BOOKKEEPING MYTHS

Four things you've been told about AI books.

What an AI should and shouldn't do with your ledger.

SWIPE · 4 MYTHS

Ledger Book by BigMo · the AI bookkeeper

~~An AI bookkeeper just posts whatever it guesses.~~

FACT

It proposes. You approve.

Every suggestion carries a confidence score and a reason. A deterministic posting service accepts only balanced entries.

~~Fixing a mistake means editing the old entry.~~

FACT

Corrections are reversals.

Posted entries are immutable. A correction is a second entry that reverses the first — both stay on the record.

~~Your balance is a number someone saved.~~

FACT

**Every number is
computed.**

Cash, profit, receivables and reports are derived from the journal on demand, so every screen agrees.

~~An AI copilot can move your money.~~

FACT

It can only read.

Twelve read-only tools — profit, invoices, runway, unusual activity. No tool exists that can post, send or move money.

AI proposes. The ledger disposes.
